

Amnesia Procedure and Understanding

Amnesia Procedure and Understanding

- If you get amnesia from negative symptoms of schizophrenia you may have to make it easier so here is a combined method for people who either have a bad memory or have amnesia at certain times
- This procedure is used with toolset seen in the images above
- You must see chemistry generation guide to bring your dopamine up to start the programming
- This is for people with alien-controlled schizophrenia and see greys – They generally are sending information from the astral plane to help and offer this programming to people with brain issues
- When you bring up the dopamine using the chemistry generation procedure and then read these instructions it'll force the robot in to a room in your mind
- This is not real this is just a simulation
- Use the toolset to destroy the robot in your imagination or closed vision
- Then get the hallucinations (greys or whoever this might be) to send up your chemistry/other body fluids by getting them to do an arm swing with open ones and closed vision ones. Be aware they may send programming to have fun. You do not have to participate in the activity – It is up to you.
- Your capacity should return to enable to have fun again
- This works for both me and my sister
- If you still see greys in your room just enjoy their presence until the serotonin goes down too far then redo the procedure
- **This is critical for people who have amnesia**
- If you have spirit guides or other entities you may be able to signal to them what fluids the body is missing (this includes various chemistry situations)
